

Where Can An Adult Get A Pneumococcal Shot?

Pneumococcal pneumonia is a serious complication of the flu. Each year, there are approximately 500,000 cases of this disease and roughly 40,000 deaths in the United States.

Getting a pneumococcal vaccine will protect you from pneumococcal pneumonia. Unlike the flu shot, the pneumococcal vaccine is usually only taken once in a lifetime. **You should get a pneumococcal vaccine if you are 65 years old or older.**

Please ask your healthcare provider if you should receive the pneumococcal vaccine if:

- You are younger than 65 and you have a serious long-term health problem such as heart disease, sickle cell disease, alcoholism, leaks of cerebrospinal fluid, lung disease (not including asthma), diabetes, or liver cirrhosis.
- Your resistance to infection is lowered due to certain medical conditions.

Please feel free to call an HCPHES health clinic nearest you to obtain the pneumococcal vaccine.

Antoine Health Clinic
5815 Antoine, Suite A
Houston, Texas 77091
Phone # (713) 602-3300
